Skills

Data Structure & Algorithms, Web Api Design, TDD, Java, Application Security, Spring Framework, Maven, MySQL, ELK, Docker, Kafka, Kubernetes, Git, Apache Flink, Google Dataflow.

Experience

Google / Search Platform – Senior Software Engineer

July 2024 - Present, Bangalore

In my current role, I am working as a tech lead on one of Search Qualifications team. We build and maintain all the tools to qualify and enable faster development and release of search platform and features.

My main role is working with the new Query Result Service which is responsible to interpret the query and aggregate data from different backends and pass the data on the different downstream services. Most notably It powers Google's AI mode search and newer AI based usecases.

Atlassian / Jira Platform - Senior Software Engineer

JUNE 2020 - June 2024, Bangalore

In my current role, I am working as a tech lead on one of the Jira Migrations team. We build and maintain all the tools to successfully help migrate Jira customers from server to cloud. My main role is working with Enterprise Stakeholder and unblock any issues they face during their migration. This involves coordination with different team within atlassian and building customised solutions for these enterprise customers. I have helped migrate many big migrators namely Splunk, Wawanessa, CBA to atlassian cloud.

Booking.com / Software Developer

August 2018 - June 2020, Amsterdam

In my current role at Booking.com, I am part of the team responsible for building, developing and maintaining the Security Data Pipeline. It is a java based distributed stateful application deployed on Google Kubernetes Engine. And it uses Apache Flink and Kafka. We have built a custom parsing, enrichment and near real time detection engine for any kind of attacks that might occur on booking applications and infrastructure. Currently the application is capable of handling 1,500,000 events/second with an average load of 250,000 events/second.

In my previous project, I rebuilt the request throttling service which was originally written in Perl. It was developed as java microservice and provided Perl and Java clients for easy integration. We used Cassandra as a distributed backend

to store counters. The service has an average load of 40,000 requests/second. With peaks upto 200,000 requests/second during attacks or very high traffic.

Barclays Technology Center India / Software Developer

June 2015 - July 2018, Pune, India

In my role, I was responsible for developing features on the BarclaycardUS website. I worked closely with the stakeholders and various backend teams to provide the Rewards feature. Barclaycard being a co-branded card, I developed various rewards features for American Airlines, LLBean, JetBlue cards. We used Java web APIs with Spring Framework and Reactjs on the frontend. We had an active user base of 6 million users, with over 50,000-80,000 unique logins per day.

Education

Visvesvaraya National Institute of Technology / B.Tech - CSE

June 2011 - April 2015, Nagpur, India

Degree in Computer Science from VNIT Nagpur with a cumulative GPA of 7.7/10

Dr. D. Y. Patil ACS College / HSC

June 2009 - April 2011, Pune, India

Completed my HSC from Pune, Maharashtra with a percentage score of 86.5%.
